For the past 13 years, Erica has been an educator at Boston Green Academy since its inception. She has been honored with two Pat Cooke Fellowships and two Fund for Teachers grants, utilizing these opportunities to bring valuable insights back to her Sustainable Engineering Physics class and the broader Boston Green Academy community. Throughout her teaching career, Erica has imparted knowledge to students on diverse topics, including upcycling in Europe, South America, and Asia, Passive Architecture in Rapa Nui, and Maasai stoves in Tanzania. The incorporation of photographs, videos, and stories from her global experiences significantly enhances student engagement. Erica aspires to bring back enhanced knowledge of net-zero housing to the BGA community, positioning Boston Green Academy at the forefront of sustainability initiatives.
