

Jovanna Robinson-Hidas (she/her) is an Environmental Science teacher at Boston Green Academy, where she has been teaching for 3 years. She holds a Master's in Education from UMass Boston and completed the Boston Teacher Residency program. Jovanna got into science education to help students understand the world around them and empower them to engage with the pressing environmental issues they will inherit.

Growing up in Western Massachusetts, she witnessed firsthand how climate change impacted local farmers, sparking a lifelong passion for environmental justice. While studying environmental justice in college, Jovanna deepened her understanding of the systemic challenges posed by the climate crisis. This led to a trip to the Middle East, where she engaged in conversations about how environmental solutions can play a pivotal role in peacekeeping efforts.

As part of the divestment from fossil fuels campaign at Mount Holyoke College, Jovanna actively contributed to efforts aimed at shifting institutional investment away from fossil fuel industries, reinforcing her commitment to advocating for sustainable and equitable futures.

In her role as an educator, Jovanna strives to instill the urgency of climate action in her students, teaching them to see environmental sustainability as a critical piece of addressing global and local challenges.
